OVERVIEW

Short description:
For the Mediterranean Sea - The CNR MED Sea Surface Temperature provides daily gap-free maps (L4) at high (HR 0.0625°) and ultra-high (UHR 0.01°) spatial resolution over the Mediterranean Sea. The data are obtained from infra-red measurements collected by satellite radiometers and statistical interpolation.

Detailed description:
Remotely-sensed L4 Sea Surface Temperature (SST) datasets are operationally produced and distributed in near-real time by the Consiglio Nazionale delle Ricerche - Gruppo di Oceanografia da Satellite (CNR-GOS). These SST products are based on the night-time images collected by the infrared sensors mounted on different satellite platforms, and cover the Southern European Seas. The CNR-GOS processing chain includes several modules, from the data extraction and preliminary quality control, to cloudy pixel removal and satellite images collating/merging. A two-step algorithm finally allows to interpolate SST data at high (HR 0.0625°) and ultra-high (UHR 0.01°) spatial resolution, applying statistical techniques. These L4 data are also used to estimate the SST anomaly with respect to a pentad climatology. The basic design and the main algorithms used are described in the following papers.

References:
Buongiorno Nardelli B., C.Tronconi, A. Pisano, R.Santoleri, 2013: High and Ultra-high resolution processing of satellite Sea Surface Temperature data over Southern European Seas in the framework of MyOcean project, Rem. Sens. Env., 129, 1-16, doi:10.1016/j.rse.2012.10.012.

Parameters:

- Analysed sea surface temperature (analysed_sst,K,CF)
- Estimated error standard deviation of analysed_sst (analysis_error,K,CF)
- Sea surface temperature anomaly (C°)

Grid type or geographical projection: Equirectangular latitude longitude grid
Vertical coverage: surface
Update frequency: daily
Operational or historical time series? Operational
Files format: netcdf conversion CF/COARDS 1.4. QHRSST GDS2.0 - L4 format
Guide to the product format: see GDS2r5.pdf downloadable from <https://www.ghrsst.org/documents/category/gds-documents/operational/>. Click on GDS 2 release 5

■ Monitoring Indicators

- Track oceanic changes in line with climate change.
- Ocean Monitoring Indicators (OMIs) are downloadable data sets covering the past 25 years.
- Used to monitor the oceanic trends in line with climate change.
- These include ocean warming, sea level rise and melting of sea ice.
- Allows users to track the vital health signs of the ocean over the past quarter of a century.
