

Early warning system for the Maltese tuna farms

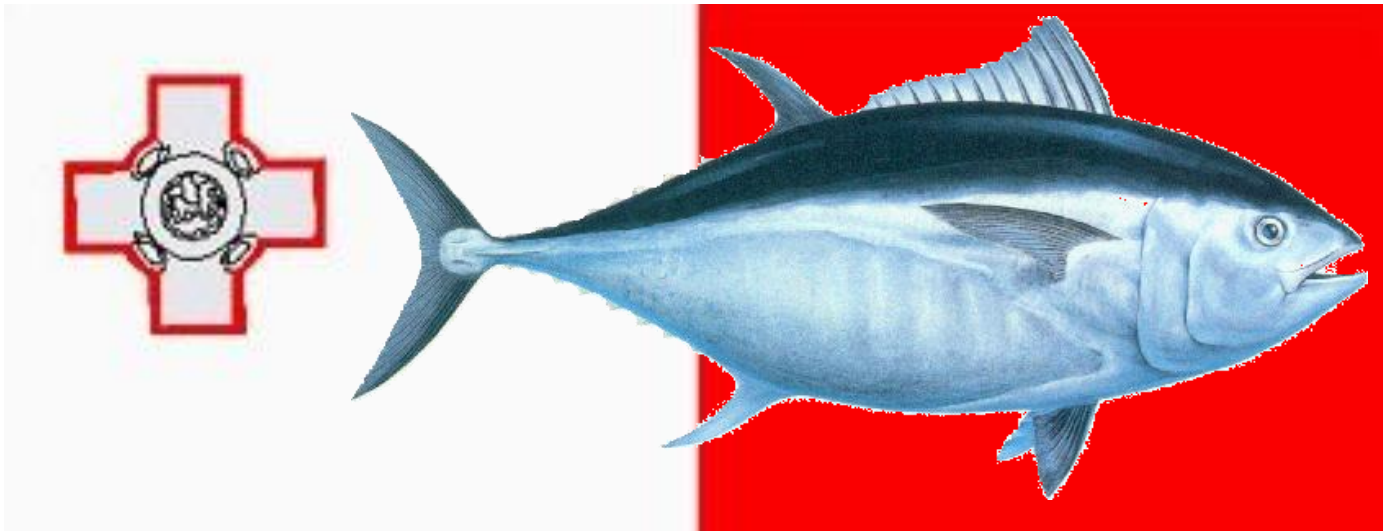

The Corto Maltese Inc. – Innovative forecast solution for your business

Tuna Aquaculture in Malta

Why is it important?

- Marine-based aquaculture
- Atlantic bluefin tuna (*Thunnus thynnus thynnus*)
- Five farms in 2015 to fatten captured tunas
- 8,051 tonnes produced in 2015 (four times more than sea bass and sea bream)
- AJD Tuna company - one of the top three Mediterranean producers - generates **1% of Malta's GDP**

Tuna vs Jellyfish

→ The problem

Millions of jellyfish seen along Malta's east coast

Saturday, 5 May 2018, 13:55

Last update: about 3 months ago

Millions of jellyfish were seen today along the entire east coast of Malta, in what marine biologist Alan Deidun yesterday described as "purple carpets of mauve stingers (*Pelagia noctiluca*) in Birzebbuga, St Thomas Bay, Xghajra, Msida and Bahar ic-Caghaq.

Alan Deidun, who coordinates the Spot the Jellyfish citizen science campaign, said the bloom consisted of just the one species which normally bloom in Maltese waters in late May and early June.

Conceptual model

The Corto Maltese approach

Early warning system for the Maltese tuna farmers

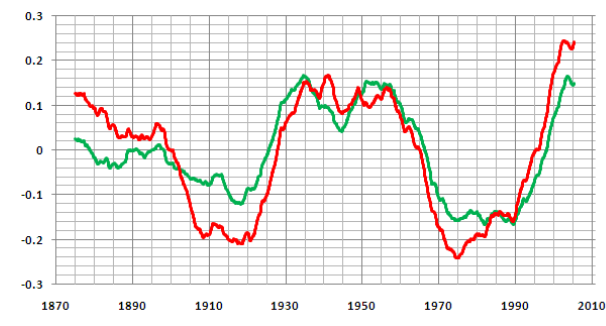

Module 1: environmental parameters

- Currents and Temperatures
- Rosario model (Univ. of Malta)

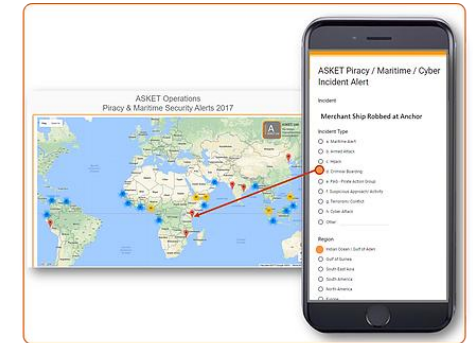

Module 2: risk assessment

- Monthly vulnerability
- 48 hours forecasts

Module 3: validation

- Hindcast with historical data
- Occurrences in news
- Jellyfish dispersion model (Univ. Malta)

Module 4: outputs

- Online portal
- Alarm via sms/email to users

INPUT PARAMETERS

RELEVANCE

ρ	Speed	0 - 2 m/s	20%
θ	Direction	0 - 360 degrees	40%
	Seawater Temperature	10- 30 Celsius	40%

Risk	No Risk	Low	Medium	High	Extreme
Speed	0.4	0.8	1.2	1.6	2
Direction	0	0.25	0.5	0.75	1
Temperature	10	15	20	25	30

$$\text{JELLYFISH RISK} = P \times 0.2 + \Phi \times 0.4 + T \times 0.4$$
